WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No. PCT/EP2004/053279

	Box No. I Basis of the opinion			
1.	With regard to the language , this opinion has been established on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item.			
	This opinion has been established on the basis of a translation from the original language into the following language, which is the language of a translation furnished for the purposes of international search (under Rules 12.3 and 23.1(b)).	3		
2.	With regard to any nucleotide and/or amino acid sequence disclosed in the international application an necessary to the claimed invention, this opinion has been established on the basis of:			
	a. type of material:			
	☐ a sequence listing			
	□ table(s) related to the sequence listing			
	b. format of material:			
	☐ in written format			
	☐ in computer readable form			
	c. time of filing/furnishing:			
	☐ contained in the international application as filed.			
	illed together with the international application in computer readable form.			
	☐ furnished subsequently to this Authority for the purposes of search.			
3	In addition, in the case that more than one version or copy of a sequence listing and/or table relating there has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.	≱to

Certain defects in the international application Box No. VII

The following defects in the form or contents of the international application have been noted:

see separate sheet

Re Item V.

- 1. Reference is made to the following documents:
 - D1: DE 199 27 535 A1 (MERCK PATENT GMBH; GESELLSCHAFT ZUR FOERDERUNG DER SPEKTROCHEMIE UND A) 4 January 2001 (2001-01-04)
 - D2: EP-A-0 653 631 (ACLARA BIOSCIENCES, INC; NOVARTIS AG; CIBA-GEIGY AG) 17 May 1995 (1995-05-17)
 - D3: GRASS B ET AL: "A NEW PMMA-MICROCHIP DEVICE FOR ISOTACHOPHORESIS WITH INTEGRATED CONDUCTIVITY DETECTOR" SENSORS AND ACTUATORS B, ELSEVIER SEQUOIA S.A., LAUSANNE, CH, vol. B72, no. 3, 10 February 2001 (2001-02-10), pages 249-258, XP001182458 ISSN: 0925-4005
 - D4: WO 01/59440 A (ACLARA BIOSCIENCES INC) 16 August 2001 (2001-08-16)
 - D5: WO 2005/068993 A (CALIPER LIFE SCIENCES, INC; WAKO PURE CHEMICAL INDUSTRIES, LTD) 28 July 2005 (2005-07-28)

2. Novelty:

Independent claims 1 and 20 are so broad, that the subject-matter of these claims is anticipated by D1. D1 discloses a device for injection of a sample specimen comprising an injection channel (K3) having a sample injection spot (Vz), an injector (L2, L3) for injecting the specimen into the fluid along the injection channel, a separation device (K5) adopted for separating a sample from the specimen at the sample injection spot (see figure 4), and a control unit (column 9, line 50/51). D1 furthermore discloses a method for extracting a sample of a specimen, comprising the steps of providing the specimen, detecting the specific relative conductivity, and extracting the sample dependant of the measured quantity (column 8, line 24-31).

A similar argument would apply with respect to D2, D3 and D4. D2 discloses injection spots (3) and (5) for separation channels (2) and (7), see figure 1; D3 is similar to D1 with separation channels SC1 and SC2, see figure 5; and D4 is also related to a microfluidic system for use in injecting a defined volume liquid sample into a capillary electrolyte channel, see page 11.

As a consequence, the subject-matter of claims 1 and 20 is not new over the prior art (Article 33(2) PCT).

The subject-matter of dependent claims 2-19 and 21-33 seems to be related to details which a skilled person would derive from D1, and is considered to be not novel over D1 (Article 33(2) PCT).

3. D5 was published after the priority date of the present application, but claims an older priority, and thus might become relevant prior art during substantive examination of the application.

4. Inventive step:

The subject-matter of the present claims is not inventive because the prior art documents D1-D4 disclose the problem of sample injection and the proposed solution of an injection channel with an injection spot and a separation device using the principle of electrophoresis. The details of the dependent claims are considered to be slight constructional changes which a skilled person would employ without inventive activity (Article 33(3) PCT).

Re Item VII.

- 1. Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in the documents D1 D4 is not mentioned in the description, nor are these documents identified therein.
- 2. Claims 1-33 are not in the two-part form in accordance with Rule 6.3(b) PCT, which in the present case would be appropriate, with those features known in combination from the prior art being placed in the preamble (Rule 6.3(b)(I) PCT) and with the remaining features being included in the characterising part (Rule 6.3(b)(ii) PCT).

Re Item VIII.

International application No.

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY (SEPARATE SHEET)

PCT/EP2004/053279

- Independent claim 1 is related to loading of a sample whereas the method claim 20 refers to extraction of a sample. The subject-matter of the claims would appear clearer, if claims to a device and the method were drafted in corresponding words (Article 6 PCT).
- 2. Method claim 21 refers back to apparatus claim 19 which leads to a doubt about the category of that claim. In the present opinion the claim was interpreted to refer back to claim 20.
